

## **FE - FACILITIES CONSTRUCTION**

Changing educational needs require the planning, design, and construction of new educational facilities as well as renovation or additions to existing schools. The size, complexity, and potential cost for such programs require that the Superintendent develop and maintain updated documentation in the following areas:

1. Educational program spatial requirements and assessment of the adequacy of existing facilities to accommodate present or proposed educational programs.
2. Cost/benefit considerations relating to facility modernization, renovation, or new construction.
3. A multi-year capital improvements program showing population projections, new capital projects needed, and associated costs. Use of a community-based advisory committee is encouraged to assist in the creation and review of this program.
4. Community use of schools and school-related facilities.
5. Facilities projects that are in process or have been completed on the present buildings and grounds.

Construction plans, requests for bond money, and all other documents required to begin and/or complete needed school construction projects will be submitted to the appropriate local and state agencies in a timely manner
